

ASHRAE Advanced Energy Design Guides for Hospitals

January 2023

Looking to achieve energy efficiency in your facility?

ASHRAE, and its partners, have made Advanced Energy Design Guides accessible for free. There are currently three PDF guides available for download, a zero-energy guide, a 50% energy guide (meets requirements of Standard 90.1-2004), and a 30% energy guide (meets requirements of Standard 90.1-1999). All three guides include tools, techniques, and practical product recommendations for achieving an energy-efficient building.

These free downloads will now be accessible to anyone who is working to achieve energy-efficient buildings.

For facilities that are looking to target a net zero energy building, these are a great tool to use either as a starting point, for new construction, or for renovation work. You may also want to send along to your design engineers and consultants to ensure your partners have the tools and resources to help your facility hit your energy targets.

To learn more about these Energy Design Guides or to download them, go to this link: www.ashrae.org/technical-resources/aedgs.
